First referee

Prof. Dr. Martin Weigert

Second referee

Second referee

Supervisor

Prof. Dr. Martin Weigert

Statement of authorship

I hereby declare that I have authored this document independently and without undue assistance from third parties. No other than the resources and references indicated in this document have been used. I have marked both literal and accordingly adopted quotations as such. There were no additional persons involved in the intellectual preparation of the present document unless indicated. Any use of AI-based tools, including generative AI systems, has been explicitly disclosed, including the tool used, the purpose of its use, and, where applicable, the parts of the work affected (e.g., "*Claude Code* was used for language revision, code completion, and debugging assistance."). I am aware that violations of this declaration may lead to subsequent withdrawal of the academic degree.

Abstract

Replace this text with an English abstract of the thesis.

Zusammenfassung

Diesen Text durch eine deutsche Zusammenfassung der Arbeit ersetzen.

Contents

Abstract	V
Zusammenfassung	V
Symbols and Acronyms	IX
1 Introduction	1
2 Background and Related Work	3
3 Methods	5
4 Results	7
5 Conclusion	9
Bibliography	11
A LaTeX tips and examples	17
A.1 General	17
A.2 Equations	17
A.3 Figures	18
A.4 Tables	18

Symbols and Acronyms

1 Introduction

Introduce the problem, motivation, research questions, and contributions.

2 Background and Related Work

Describe the necessary background and position the work in the literature.

3 Methods

Describe the data, methods, implementation, and evaluation protocol.

4 Results

Present the experimental results and their analysis.

5 Conclusion

Summarize the findings, limitations, and possible future work.

Bibliography

- [He+16] Kaiming He et al. “Deep residual learning for image recognition”. In: *Proceedings of the IEEE conference on computer vision and pattern recognition*. 2016, pp. 770–778.

List of Figures

- A.1 **Example figure.** Line plot showing a noisy signal and its smoothed trend (left).
Heat map showing a spatial intensity distribution (right). 18
- A.2 **Alternative visualizations of the same data.** Each panel shows the same
synthetic Iris-style dataset. 19

List of Tables

A.1 **Example quantitative comparison.** We show accuracy, precision, and recall (higher is better) as well as error (lower is better) for three methods. 19

A LaTeX tips and examples

A.1 General

- Use present tense in general: “For evaluation, we use the F_1 score ...” “The advantage of the method is its lower memory use ...” and “We find that performance improves with more training data.” *etc.*
- Use past tense for completed experiments: “We trained the model for 100 epochs.”, “We collected 1000 samples from the dataset.” *etc.*
- Cite entries from `references.bib` by their key, e.g. `\cite{he2016deep}` produces [He+16]
- Use the macros from `definitions.tex` for abbreviations such as `\eg`, `\ie`, and `\etc`, and for the number sets `\R`, `\Z`, `\N`, `\Q`, and `\C`. For example, `$x \in \R^n$` produces $x \in \mathbb{R}^n$
- Add a `\label` to sections, equations, figures, and tables and refer to them with `\ref`, e.g. Equation A.1. Do not type reference numbers manually
- In general, refer to each figure and table in the text before it appears

A.2 Equations

Use `$...$` for inline math, e.g. `$F_1$` produces F_1 . Use the equation environment for numbered equations:

$$F_1 = \frac{2 \text{ TP}}{2 \text{ TP} + \text{FP} + \text{FN}}, \tag{A.1}$$

where TP, FP, and FN are the numbers of true positives, false positives, and false negatives.

A.3 Figures

In general, use wide figures and place them at the top or bottom of a page. *E.g.* Figure A.1 uses the full text width, while Figure A.2 uses subfigures. Put captions below figures and briefly explain all panels, symbols, units, *etc.*

A.4 Tables

Put table captions above the table. Use booktabs, omit vertical lines, keep decimal places consistent, and bold the best value in each column, as in Table A.1.

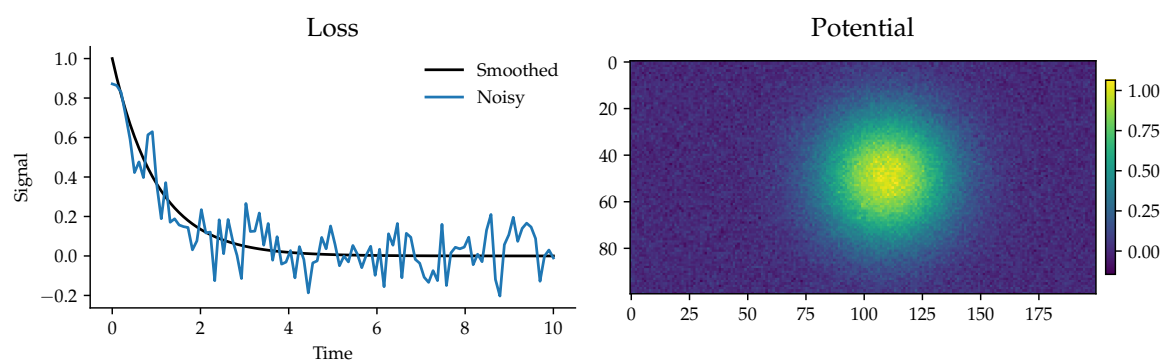

Figure A.1: **Example figure.** Line plot showing a noisy signal and its smoothed trend (left). Heat map showing a spatial intensity distribution (right).

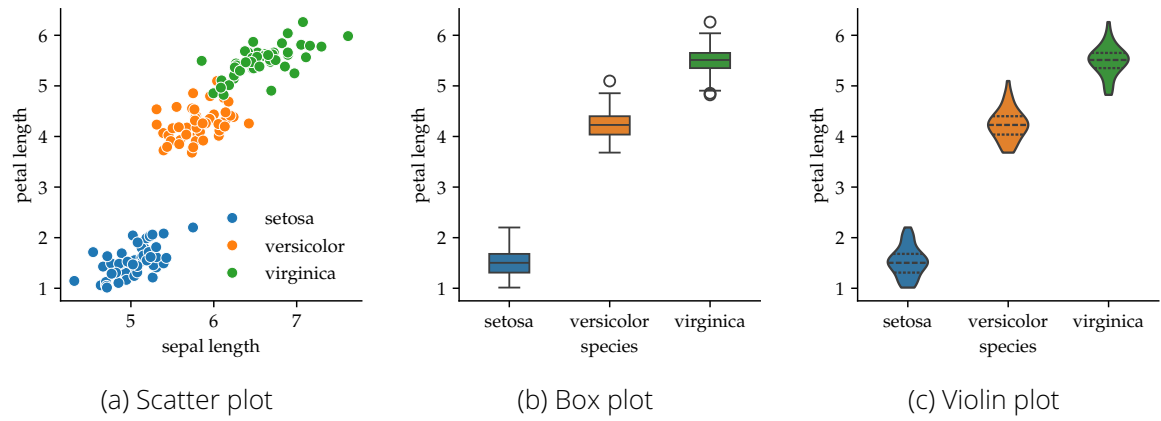

Figure A.2: **Alternative visualizations of the same data.** Each panel shows the same synthetic Iris-style dataset.

Table A.1: **Example quantitative comparison.** We show accuracy, precision, and recall (higher is better) as well as error (lower is better) for three methods.

Method	Accuracy $\uparrow$	Precision $\uparrow$	Recall $\uparrow$	Error $\downarrow$
Method A	0.81	0.80	0.78	0.23
Method B	0.85	0.86	0.84	0.19
Method C	0.89	0.84	0.82	0.15
